

This tool is used to extract the broken porcelain from broken spark plugs in Ford® Triton Engines. In some cases, the porcelain will break off in the sleeve and will need to be extracted. Unlike other tools that tell you to push the porcelain through the sleeve (Ford® says specifically not to do this), this tool adheres to the porcelain.

- Provides an effective method to thoroughly extract broken porcelain and other debris that occurs when removing spark, preventing damage or a failed repair
- Uses a special perma-bond, allowing user to extract the broken porcelain and other debris from the sleeve
- Saves time and money

Package Type: Blow Molded Case

Dimensions: 9.75" x 5.5" x 1.5"

Warranty: Lifetime vs. Mfg Defect

UPC: 047084392003

39200
